Yi Li's Draft

yi's Profile

filter bar without the # places

others Profile

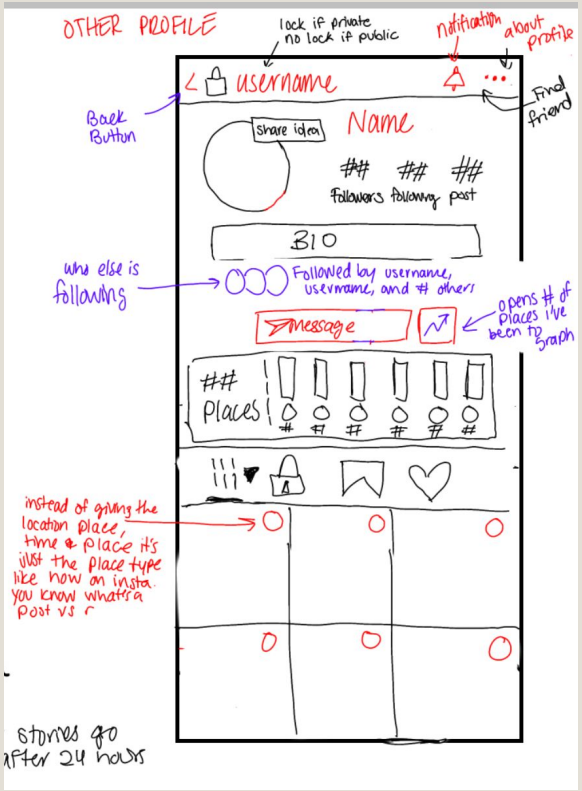

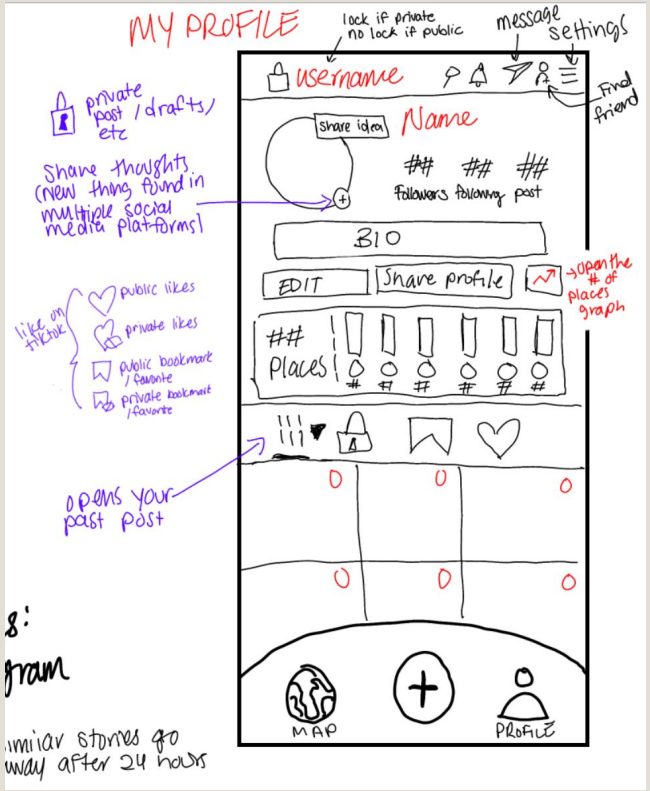

Home Page

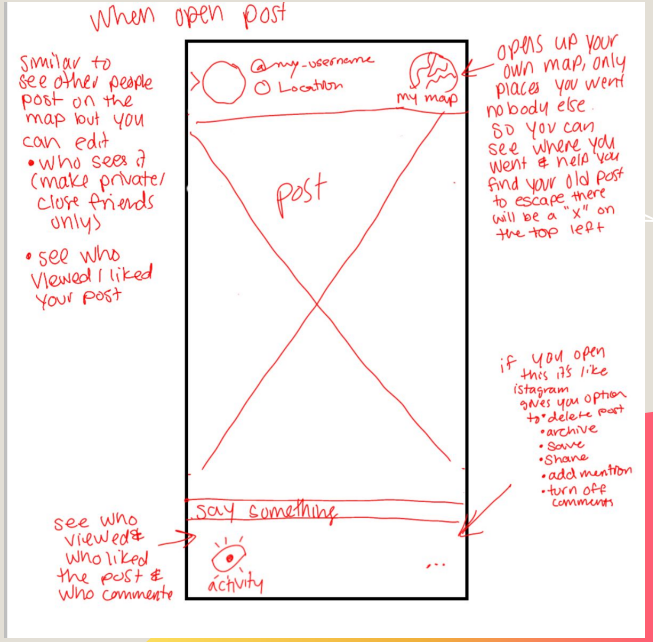

Moving the search feature to the side or removing it entirely

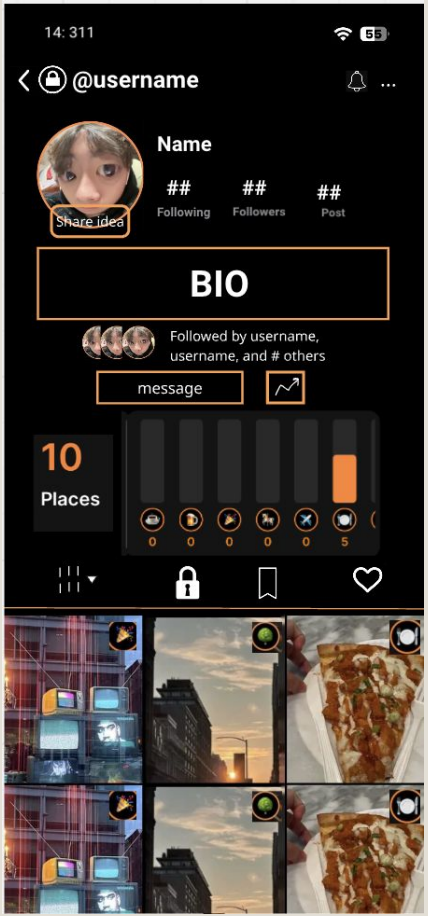

Ruba Akbar's draft

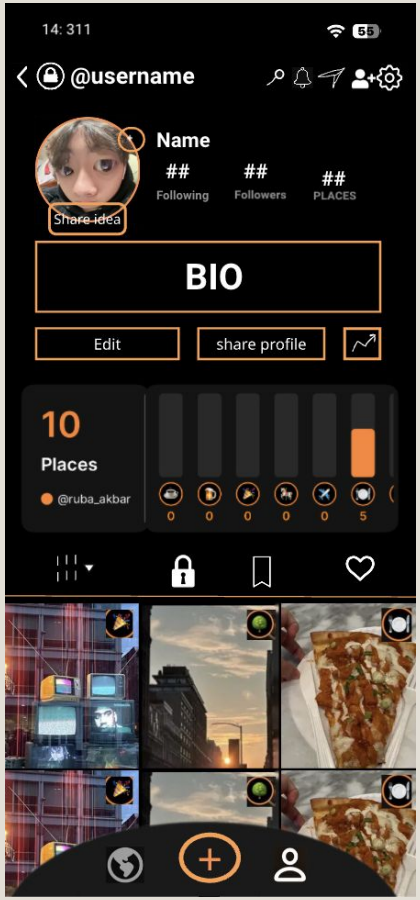

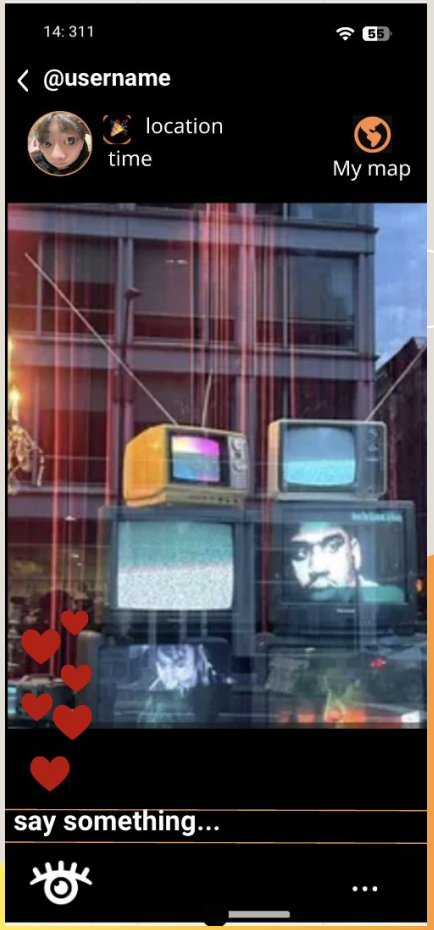

Ruba Akbar's draft

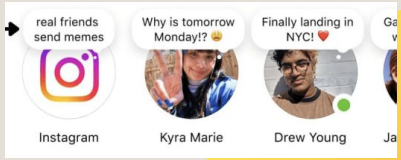

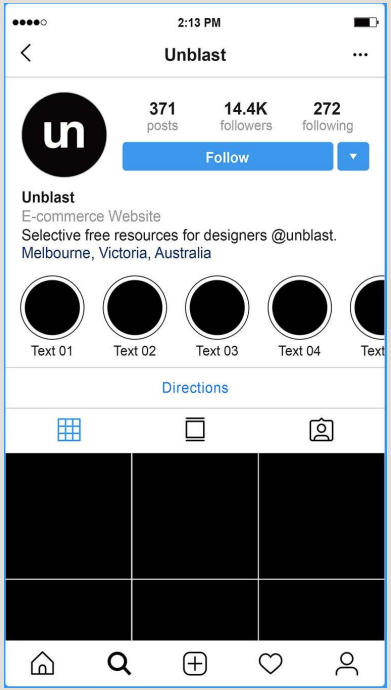

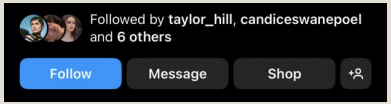

Ruba Akbar

Examples / Inspo

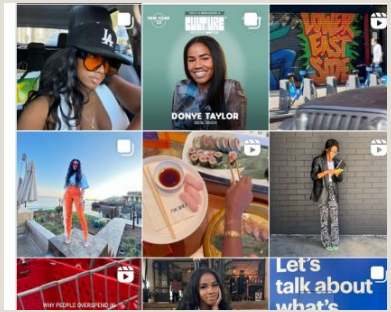

instagram

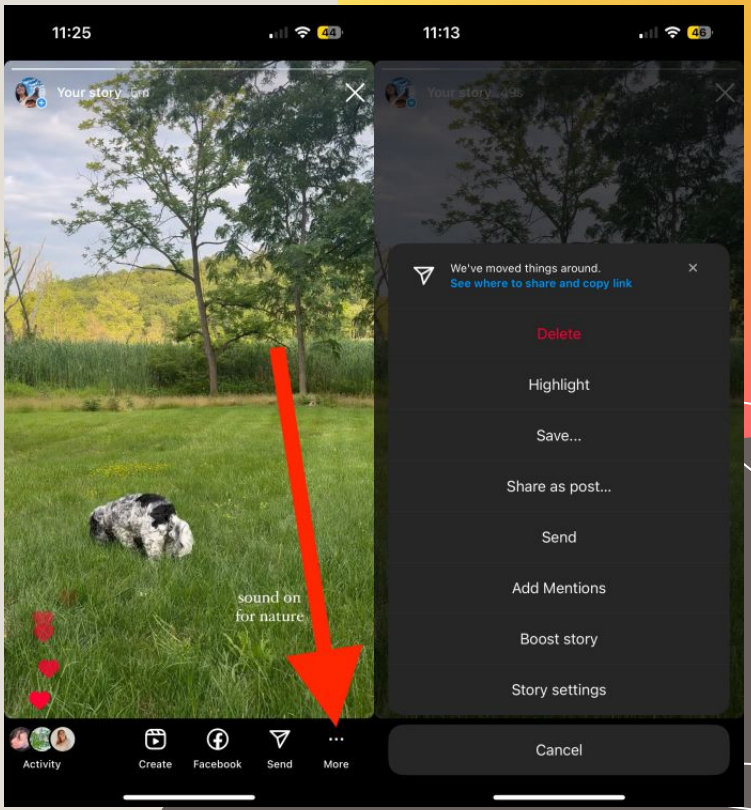

What features I like from Instagram:

- Post, follower, following count
- You can see who you both follow
- On the post their are icon telling the viewer if the post is a reel or a post
- When you post, you see who saw your post, who liked, and you can delete
- Instagram notes

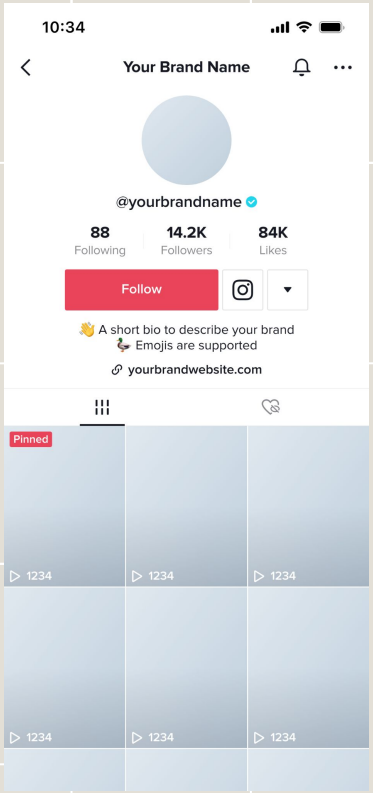

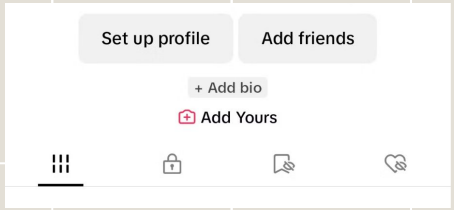

Ruba Akbar

Examples / Inspo

TikTok

What features I like from Tiktok:

- The notification button on top
- Have a post, like, bookmark, private post section

Other app inspo:

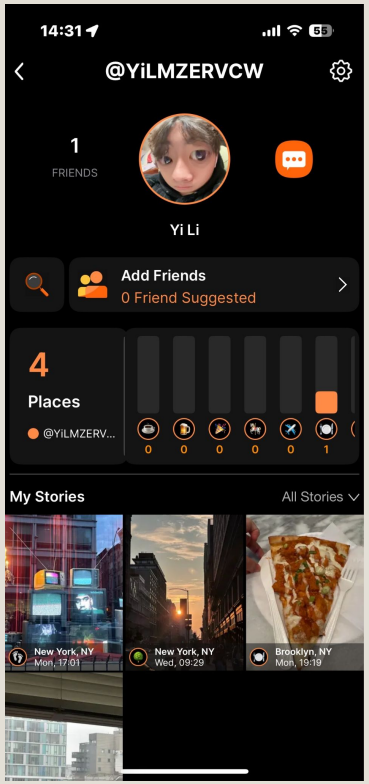

- Be real
- Snapchat

Similar idea with 24 hours see see post

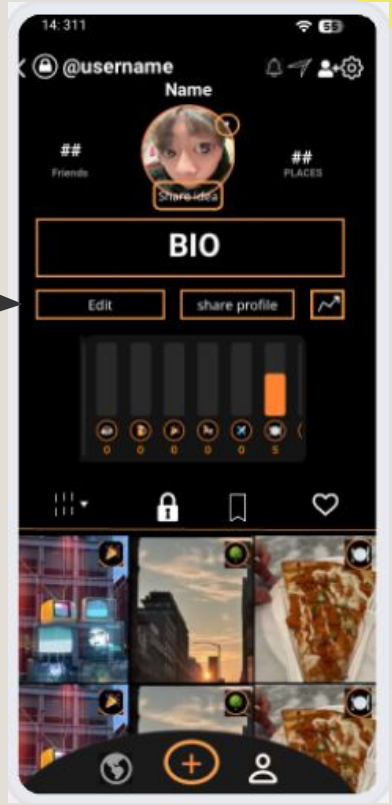

For our Final Design for **our profile**:

Wireframing Link

Old

New

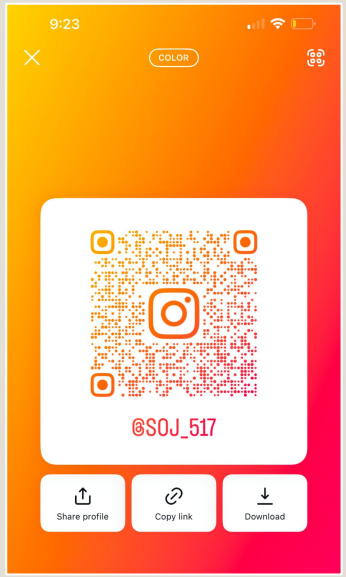

Comparison:

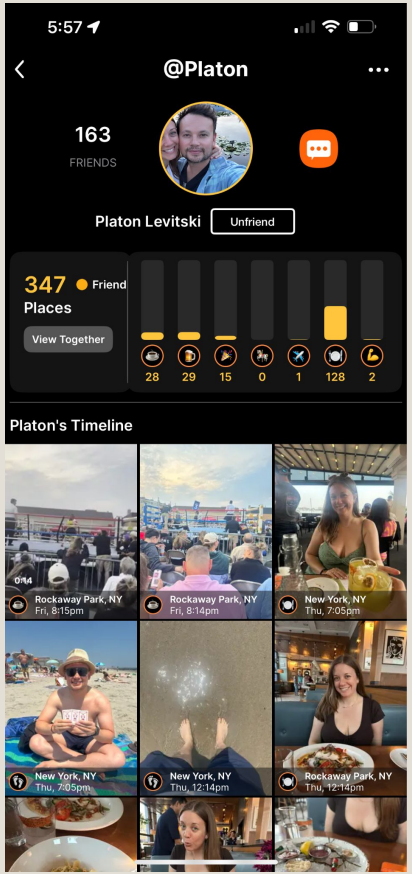

1. The add friends feature would be compressed into the “Add Friends” button on the top right next to Settings
2. # of places is on the right side of the profile picture, in symmetry with the # of friends
3. “Share Idea” similar to Instagram’s note feature
4. Added “Edit”, “Share Profile” and a graph filter button. Graph filter button would make the graph not visible when pressed.
5. A navigation circle at the bottom.
6. Notification and Messages at the top right
7. Bookmark, liked tab to see what the user has bookmarked/liked, similar to TikTok’s.
8. A lock at the top left to enable or disable private account

Our combine idea:

- QR code for share profile
- Edit, share, bio

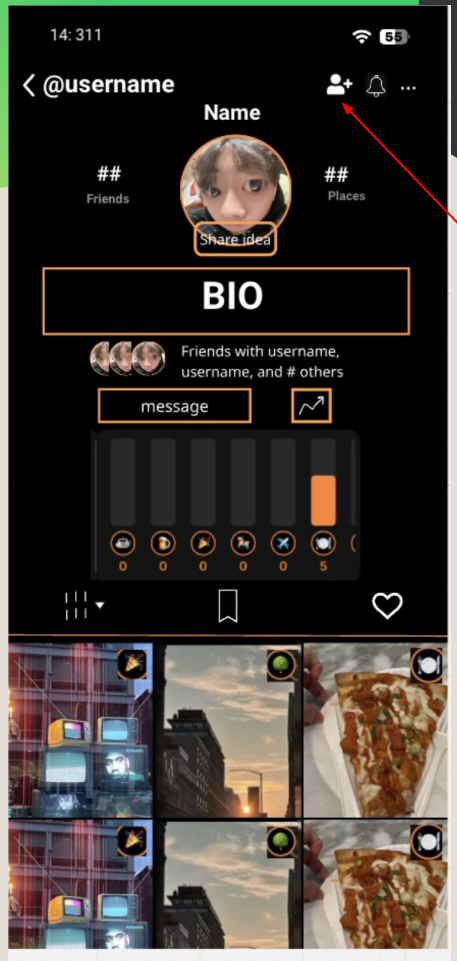

OLD

Final Design for **other profile**:

Wireframing Link

NEW

Would change icons if added or not

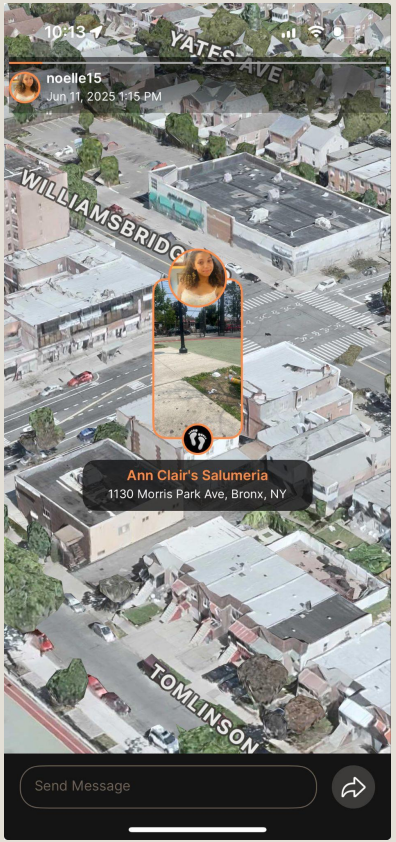

What's been changed:

- Bio added to the new one
- Add Friend/messages/share idea to the new
- View mutuals
- Username/name location
- Split view of # of Friends and # of places
- Collapsable stats bar
- Views posts,public bookmarks, recent likes (can toggle private/public like tiktok)
- Notification for specific persons post

For our Final Design for **viewing post**:

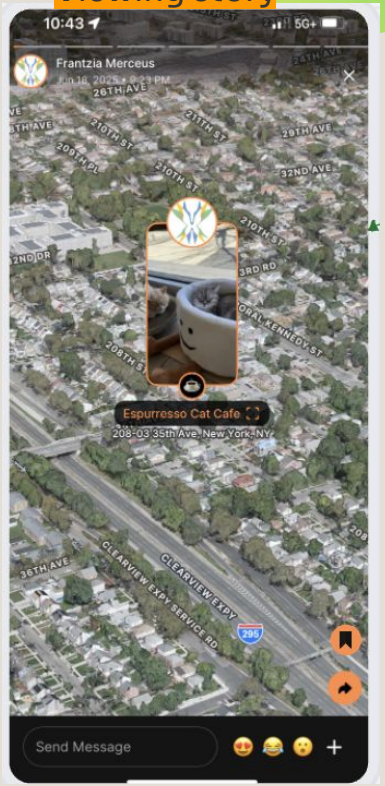

Wireframing Link

Before

After:

Viewing story

Viewing OTHER'S post

See other's map/world, interesting feature, make it more engaging

You can message and react

For our Final Design for **viewing OWN post on my profile page**:

Wireframing Link

Before

N/A - They don't have this

Our combine idea:

- Full screen the post
- Can you see who saw, liked, and delete the post

After:

My map - make easier to find your post and it's cool to see where you've been

When you press more it gives you options to delete, archive, share, mention, turn off/on comments

THE END
