Week 3:
Spatial story and new features

Soja Sunny, Ruba Akbar, Yi Li

https://miro.com/app/board/uXjVIm75h8g=/?share_link_id=441602670748

Export story

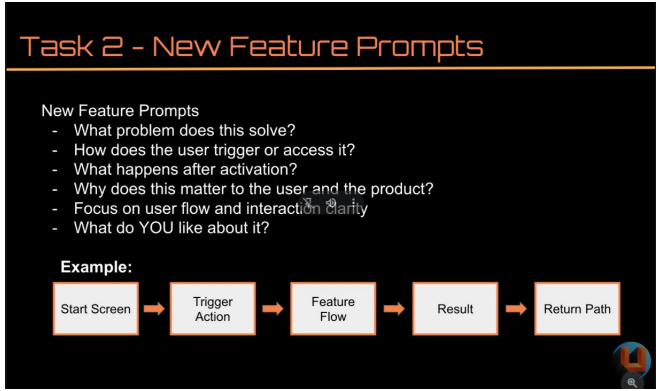

When you press the share icon on the bottom right, it gives you the option of exporting (to different social media apps, it will give you options to export to instagram or snapchat), copying a link to the spatial story, and there should be a option to saving your story into your photos, so the user can save it to their phone.

There could be an option to send a story to your friends inside the app as well to make the app more interactive.

*** the icon should be orange and black to match the app colors

New feature proposal

Task 2 - New Feature Proposal

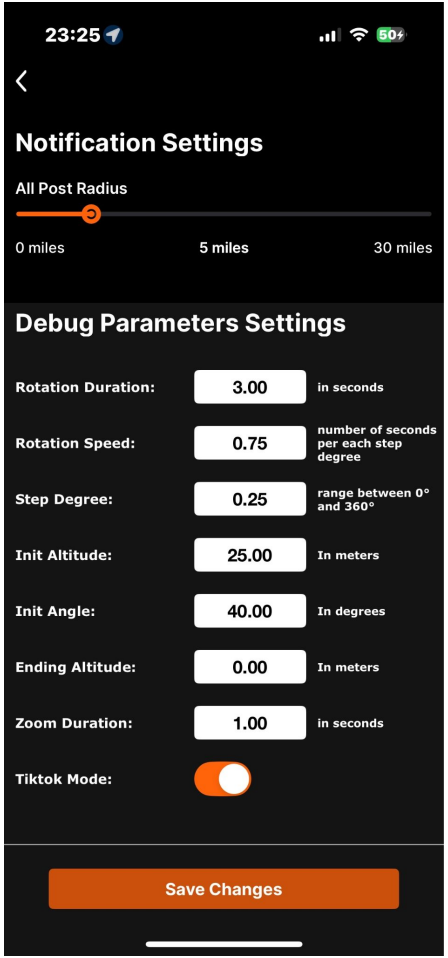

- **Task**: Propose one new feature
- Must fit naturally into Ubiq's current product experience
- Should be realistic, useful and well-scoped.

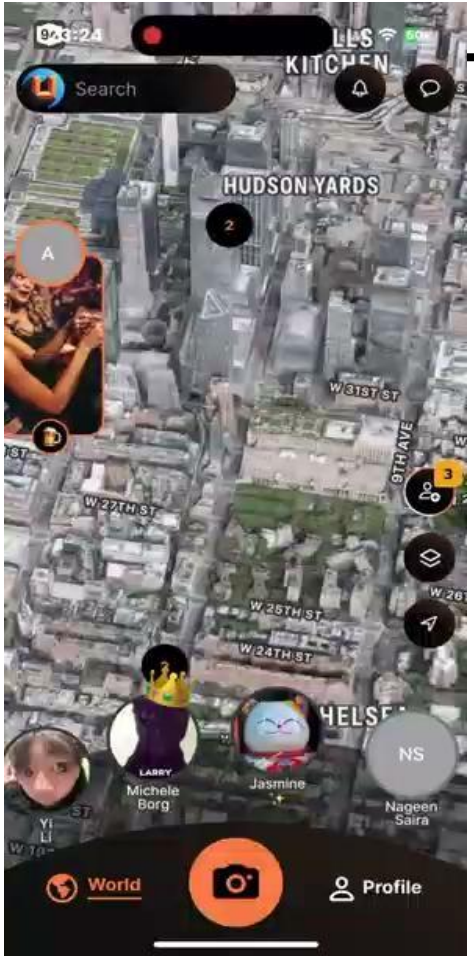

Add:

- Rating the area youre at (yelp), filter so you can search for 5 star area
- Instagram notes
- Add music to your stories, add videos
- Popup that verifies parameter changes are saved

Remove:

- specific address, but keep general area (for safety reasons)

Spatial story improvement

Changed the zoom duration to 1 second to keep it very minimal and the current zoom goes too far out so we think keeping it minimum is better and would allow users to easily view the space around the story.

Transition of the Zoom out/in

The transition when zooming out in spatial stories seems choppy and disorienting. A smooth transition, like in Google Earth, would make it easier to follow and look better.

A smooth Zoom out would look nicer since its a repetitive action a User will see consistently

The end
